

COMPREHENSIVE LIFTING SOLUTIONS

Call: 0845 4662 999
www.levellifts.co.uk

Best advice, creativity, flexibility, delivering promises, quality products and after sales service - we passionately believe in all of these things.

Experience; if our 20+ years of experience has taught us anything, it is to listen to our customers. Our mission is to fulfill your criteria whether it be design, budget, delivery or a mixture of all these things.

Independence; whatever the building constraints or whichever type of lift you require, we have a model from our vast range of suppliers (worldwide) to suit your requirements.

Let us help you to meet the requirements of the Disability Discrimination Act and Part 'M' of the Building Regulations.

ENCLOSED VERTICAL PLATFORM LIFTS

Enclosed Vertical Platform Lifts are now recognised as the most practical solution for low to medium rise applications.

With internal and external models available our product range can also be incorporated within fire rated areas of a building.

Side entry/exit to the platform is also available along with many other options which include: special colours, glass, automatic single swing or centre opening doors, tactile buttons and key isolation switch.

- No motor room required
- Can be installed into shallow pit if desired
- Up 13 metres travel (5 stops)

Features include: battery backed alarm, emergency battery lowering, arrival chime, voice annunciation, directional arrows on each landing.

SHORT RISE VERTICAL PLATFORM LIFTS

A cost effective solution allowing easy access where a change in level-(usually overcome by steps) inhibits wheelchair users. An open aspect design allows each lift to blend in with the aesthetics of the building. Portable versions of this lift are available for sale or hire.

INCLINED WHEELCHAIR PLATFORM STAIRLIFTS

Wheelchair Platform Stairlifts can be used as an alternative to the Vertical Rise Platform Lift and can be fitted to new or existing stairways (whether straight or curved). By choosing the folding seat option this product can also provide access for semi-ambulant users. The Linwood Xpress model (for straight staircases) is held in stock and can therefore be provided within an exceptionally short time frame.

ALTERNATIVE SOLUTIONS

Versatile, portable stair climber range offering a lowcost solution for limited use applications. Models available for both seated and wheelchair users.

EMERGENCY EVACUATION CHAIRS

Does your emergency evacuation plan include an evacuation chair for someone with a mobility-related disability? In the event of a fire or earthquake, elevators should not be used for the emergency evacuation of a building. In this situation, people with limited mobility may be trapped or have to wait for a prolonged period of time in an area of refuge.

Designed so that a small attendant can easily move a much larger passenger down the stairs, the Evacu-Trac is easily set up and ready for a passenger to transfer from their wheelchair to the comfortable sling seat. The evacuation chair's durable rubber tracks firmly grip the stairs and the safety brake can stop the unit on the stairs if necessary. The Evacu-Trac is completely stable and self-supporting on flat surfaces and during descent.
